Mrs. Winslow's Soothing Syrup.

FOR CHILDREN TEETHING.—Greatly facilitates the process of teething, by softening the gums, reducing all inflammation—will allay ALL PAIN and spasmodic action, and is SURE TO REGULATE THE BOWELS. Depend upon it, mothers, it will give rest to yourselves and RELIEF AND HEALTH TO YOUR INFANTS. We have put up and sold this article for years, and can say in confidence and truth of it, what we have never been able to say of any other medicine—NEVER HAS IT FAILED IN A SINGLE INSTANCE TO EFFECT A CURE, when timely used. Never did we know an instance of dissatisfaction by any one who used it. On the contrary, all are delighted with its operation, and speak in terms of commendation of its magical effects and medicinal virtues. We speak in this matter "WHAT WE DO KNOW," after years of experience, and pledge our reputation for the fulfillment of what we here declare. In almost every instance where the infant is suffering from pain and exhaustion, relief will be found in fifteen or twenty minutes after the syrup is administered. Full directions for using will accompany each bottle. Be sure and call for "Mrs. Winslow's Soothing Syrup." Having the fac-simile of "CURTIS & PERKINS" on the outside wrapper. All others are base imitations. Sold by Druggists throughout the world. Price, only 35 cts. per bottle. To the Dental Profession.

I HAVE PATENTED, and now desire to introduce, an important improvement in the construction of ARTIFICIAL DENTURES, whereby the strength, reliability and facility of repair, pertaining to swaged plate work, is communicated to moulded metallic or vulcanizable base. Strong Plate Teeth as firmly attached to the base as if soldered to swaged plate, are, by this process, substituted for those specially designed for moulded base. By their use the operator is left free to exercise his own judgment in their arrangement, and finds himself no longer confined to the sameness of the present style of blocks, or single teeth weakened by carving for moulded work.

No new appliances are required in this process. It is easily acquired by any one familiar with either moulded or swaged work. It gives to the operator confidence in the reliability of his cases, exempting him from the disappointment and perplexity often attendant on his most faithful efforts. It renders partial cases as reliable as full sets, and, consequently, will tend to ameliorate the present deplorable practice of extracting every tooth, sound or unsound, which stands in the way of the latter.

The method has been thoroughly tested, and is now submitted to the profession with the assurance that it will be found to fulfill all that is claimed for it. Its results are highly artistic, very beautiful, and afford the utmost satisfaction to operator and patient.
